Allowable Subject Matter

1. Claims 1-14 are allowed.
2. The following is an examiner's statement of reasons for allowance: Regarding claims 1-14, the prior art of record fails to teach of a selection logic operative during the operation of a network device that enables bridging logic and disables routing logic under a first set of operating conditions where the transition from router logic to bridge operation includes merging multiple network-layer segments into a bridged network-layer segment, and enabling the routing logic and disabling the bridging logic under a second set of operating conditions, where the transition from bridge operation to router operation includes dividing a bridged network-layer segment into multiple segments having distinct routing identities. The closest reference, Perlman (U.S. Patent No. 5,420,862), teaches of a network device comprising bridging logic operative to function as a data link layer bridge and routing logic operative to function as a network layer router, but fails to teach of a selection logic operative during the operation of a network device that enables bridging logic and disables routing logic under a first set of operating conditions where the transition from router logic to bridge operation includes merging multiple network-layer segments into a bridged network-layer segment, and enabling the routing logic and disabling the bridging logic under a second set of operating conditions, where the transition from bridge operation to router operation includes dividing a bridged network-layer segment into multiple segments having distinct routing identities.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
